

Here's a new VLSM Lab with 4 departments:

VLSM Lab 2 – Apex Corporation

Main Network Assigned: 192.168.10.0/21 (2048 total addresses)

You are required to design an efficient **VLSM** addressing scheme for the following departments:

Department	Number of Hosts Needed
Headquarters	120 hosts
Engineering	80 hosts
Sales	40 hosts
Guest WiFi	25 hosts

Tasks:

1. **Design the VLSM scheme** (fill in the table):

Department	Hosts Needed	Subnet Mask	Network Address	First Usable IP	Last Usable IP	Broadcast Address
Headquarters	120					
Engineering	80					
Sales	40					
Guest WiFi	25					

1. **Rules:**

- Start assigning from the **largest** department first (Best Practice).
 - Use the given main network 192.168.10.0/21 .
 - Do not waste IP addresses (use the smallest possible subnet for each department).
-

Would you like me to:

- Wait for you to fill the table and then check your answers?
- Give you step-by-step guidance on how to calculate it?
- Or give you the complete answer key right away?

Just tell me how you want to proceed! 😊
